

Dr. Fitt's OMG Nasal Spray

OMG nasal spray was developed by Dr Roby Mitchell in compliance with research done by ENT specialists at the world famous Mayo Clinic in Rochester Minnesota. These researchers related to Dr. Mitchell that over 97% of patients with sinusitis had a fungal rather than a bacterial infection.

They found that repeated treatments with antibiotics just kept patients in a revolving door of trial and error treatments. When they changed their therapy to target fungi, they finally saw their patients get well. The prescription antifungal they used, however, had potentially dangerous side effects.

Dr Mitchell has used his fifteen years of studying natural antifungals to come up with a safe, all natural treatment for sinus fungus. Not only can these fungi cause **sinus infections**, they can also be responsible for **snoring, post nasal drip, nasal allergies, mouth breathing, ear infections, ear wax, sinus headaches, and nasal polyps**. Usually symptoms are relieved in 48 hours. If symptoms persist unabated after 48 hours, consult a healthcare practitioner trained in natural therapies.
